## DETAILED ACTION

### *Response to Pre-Amendment*

1. This office action is in response to pre-amendment file on 10/31/03.
  - Claims 1-17 have been cancelled.
  - Claims 18-29 are newly added.
  - Claims 18-29 are pending.

### *Double Patenting*

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 18-29 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-16 of U.S. Patent No. 6,661,706. Although the conflicting claims are not identical, they are not patentably distinct from each other because the elements recited in claims 18-29 of the present application are art recognize equivalent with claims 1-16 of U.S. Patent No. 6,661,706.

Art Unit: 2818

With regard to claims 18-29, the present application recited a nonvolatile semiconductor memory device comprising memory block include memory pages, control circuit, sense/latch circuit, row decoder, which is a mere broader version of the semiconductor memory device disclose in claims 1-16 of U.S. Patent No. 6,661,706. The purpose of the invention is to provide high-speed in a large batch of data written within the nonvolatile semiconductor device.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 18-20, 29 are rejected under 35 U.S.C. 102(b) as being anticipated by Kikuchi (6,226,202).

Regarding to claims 18-20, 29, Kikuchi discloses a nonvolatile memory comprising: a plurality of memory cell array includes a in a plurality of blocks (BL0-BL511) and each includes a plurality of pages (PG); a control circuit (10) configured to read data store in one page of the memory cell array and to write the data to other page of the memory cell array, wherein a part of the data in one page is different from a corresponding part of the data in the other page of the memory cell array; wherein one page of the memory cell array and the other page of the memory cell array include in different memory blocks (BLJ, BLh), wherein the memory cell array comprises a plurality of non-volatile transistor are serially connected form a NAND cell (Col. 3, lines 56-57).
